

# How to connect the hybrid stove to Wi-Fi

Difficulty level: Easy Time consumption: 5-10 minutes Tools: iPhone (iOS 12.3 or newer) or Android (Android 5 or newer) Components: Router with Wi-Fi connection, hybrid antenna

## Mounting the antenna

To ensure a strong and stable Wi-Fi connection install the included Wi-Fi antenna. The antenna must be mounted on the back of the Hybrid stove. A brass threaded rod will be available, to screw the antenna onto:

#### Hybrid app Wi-Fi setup

Make sure that the Aduro Hybrid app is installed and updated to the newest version:

Android: Aduro Hybrid - Google Play

iOS: Aduro Hybrid - App Store

When opening the app for the first time, it is important, that the app is allowed access to the device location during the use of the app as it will not function properly without:

The stove setup will then be presented right away.

If the app has been used before, or another stove needs to be connected, the wizard can be accessed in the function menu:

The setup wizard will be presented, click on start to continue to the next screen. Here the stoves serial number and password need to be entered. This information can be found on a grey label on the inside of the lower door:

Before continuing, if this is the first setup of the stove, be sure to check off the box "Connect directly to the stove's Wi-Fi":

When pressing "continue", the process is a little different on Android and iOS:

Android	iOS
On Android, a pop-up message will most likely appear, press the connect button. If not, the phone might try and connect automatically.	On iOS, the app cannot auto connect to the stove's local Wi-Fi signal because of Apple's permissions. Therefore, this needs to be done manually.
If this fails, the phone will tell you to do it manually.	&Aduro
Connect to device?	Plesse enter the 5-6 digit serial number and 10 digit password provided to connect to your oven. Oreclentials
Aduro Hybrid will use a temporary Wi-Fi network to connect to the device. Aduro-11111	Connection With the having trouble getting you connected, please go to Settings -> With and connect to Aduce-20741 with a password. Then return to this sap and press continue button. On closer software go to PTFAsser where sock is your setainumger and use the password "12345678".
Cancel Connect	Connect
To connect manually exit the Hybrid app and go to the phone settings, then head to the Wi-Fi section:	Exit the Hybrid app, and open the settings menu, then head to the Wi-Fi settings:

## Troubleshooting

#### Wi-Fi is not showing up:

If the Wi-Fi does not show up in the list of available networks, this can be caused by several errors:

- Wi-Fi name: Wi-Fi names containing special characters (! & % etc.) and spaces can cause issues as the stove cannot always recognize these. We recommend trying to change the Wi-Fi name to something simple and max 10 characters, like "mywifi", to see if this is the cause.
- Make sure a 2.4 GHz network is available: The stoves network module can only work with a 2.4 GHz connection. Many newer network routers might only produce a 5 GHz signal as standard and need to have the 2.4 GHz signal activated. Other routers might produce separate signals, look for one labeled with 2.4 GHz.
- Make sure the router and stove are turned on.
- Restart the router and stove: Sometimes a simple restart is all that is needed to refresh the system.

#### Phone cannot connect to the stove:

• Make sure that location data is allowed for the app:

- Restart the phone and app.
- Restart the stove.
- Reinstall the app, and make sure that the newest version is installed. The newest version can be found in the phone's app store.
- Make sure there is a stable Wi-Fi connection that the stove is connected to.
- Try to reconnect the stove to the Wi-Fi through the setup wizard.
- Perform a factory reset of the stove by clicking the factory reset button on the control board for 10 seconds.

If nothing else works, try contacting your local craftsman.
